### On the difference between analysis and design models

Please consider the following question:

**What is the characteristic difference between analysis and design models?**

The following table offers you three different answers to this question. Please mark each answer with a value between 0 and 3.

- 0: It has nothing to do with the question.
- 1: It has something to do with the question but it is far from being a complete and true answer.
- 2: It approximately answers the question, but I do not feel fully satisfied with it.
- 3: It perfectly answers the question.

You can repeat the same value for different answers. For example: 1-3-1 or 2-2-2.

Nr	Answer	Value
1	The analysis model represents the application domain, the design model represents the software system.	
2	The analysis model describes something that exists, the design model specifies something we want to build.	
3	The analysis model is abstracts low-level details, the design model gives all necessary details about the represented thing.	

Thank you.
